

Multiplying Decimals - Word Problems

- 1) Abraham is driving his truck at a speed of 0.6 miles per minute. If he maintains a constant speed, how far will Abraham drive in 8.5 minutes?

- 2) Harry makes \$34.75 per hour as an accountant. If he works 26.5 hours, how much money will Harry earn? Round your answer to the nearest cent.

- 3) A piece of cardboard is 1.5 feet long and 0.8 feet wide. What is the area of the piece of cardboard?

- 4) Helena bought a box of cereal that weighed 12 ounces and was priced at \$2.18. If each ounce was priced at the same rate, how much would a 16-ounce box cost?

- 5) Bosco is driving from Detroit to Oklahoma City at an average speed of 42.8 miles per hour. If it has been 6.5 hours since he started driving, what is the distance that Bosco has covered?
