

Kite - Angles

A) Solve for x in each kite and find the measure of the indicated angle.

1)

$m\angle ABD = (-3x)^\circ$; $m\angle DAC = (6 - x)^\circ$

$x = \underline{\hspace{2cm}}$; $m\angle \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

2)

$m\angle X = (x + 21)^\circ$; $m\angle V = (x - 5)^\circ$

$m\angle U = \underline{\hspace{2cm}}$; $m\angle X = \underline{\hspace{2cm}}$

3)

$m\angle M = (12 + 7x)^\circ$

$x = \underline{\hspace{2cm}}$; $m\angle \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

$m\angle R = 2x^\circ$; $m\angle TSU = (32 - x)^\circ$

$m\angle T = \underline{\hspace{2cm}}$; $m\angle TUS = \underline{\hspace{2cm}}$

B) Solve for x in each

5)

$m\angle EGD = (3x + 9)^\circ$; $m\angle FDE = (-55 + 5x)^\circ$

$x = \underline{\hspace{2cm}}$; $m\angle GED = \underline{\hspace{2cm}}$

$m\angle FDG = \underline{\hspace{2cm}}$; $m\angle D = \underline{\hspace{2cm}}$

$m\angle Q = (9x + 97)^\circ$; $m\angle P = (57 - 7x)^\circ$

$x = \underline{\hspace{2cm}}$; $m\angle S = \underline{\hspace{2cm}}$

$m\angle R = \underline{\hspace{2cm}}$; $m\angle P = \underline{\hspace{2cm}}$
