

The Golden Gate Bridge

by Katie Clark

Have you ever crossed a bridge and looked over the edge? Some bridges are suspended over ravines or rocks while others cross bodies of water. Some are low to the ground while others are very high.

The Golden Gate Bridge is a landmark. It crosses the water suspended high in the air and is easy to recognize.

The Golden Gate Bridge is 1.9 miles long. Its official name is the International Gateway to the Golden Gate, connecting the mainland with the San Francisco Peninsula.

The bridge was built to connect two pieces of land with a narrow waterway named that. This narrow waterway "Chrysopylos" and the ocean. The name "Chrysopylos" means "Golden Gate" in Greek.

Gate Bridge is easy to

a that stretched over a
ornia. It connects the

waterway between the
ple wonder why it was
n Fremont called the
e between the land
orn.

The bridge was a great addition to the area. Before it was built, people could only cross the water by ferry boat. This was a long trip. At times, it caused travel to take hours. People who lived in one place and worked in the other had to spend long amounts of time getting back and forth.

The bridge took four years to build, between 1933 and 1937. The construction began with making concrete anchors to hold the bridge. With concrete in place, towers

Name : _____

were built. Cables were hung between the towers to help support the bridge. At last the road was added. When it was done, the travel between the two spots became much easier. Business in both places grew.

Today, the Golden Gate Bridge is no longer the longest bridge made. Many people recognize it by its bright color. A railing and a net along the road help keep people safe. These prevent people from falling or jumping off.

Many people visit the area simply to see the Golden Gate Bridge. This landmark is an example of creative problem solving.
