

# Virginia Apgar

by Guy Belleranti

Virginia Apgar earned her medical degree from Columbia University in 1933. Her goal was to establish herself as a surgeon.

She began as a surgical intern and resident for three years at Columbia Presbyterian Hospital. Then, the head of the surgical department wanted her to enter the field during the depression era and saw that other women fail trying to meet the same fate.

Struggling to secure additional training at New York.

Then, she returned to get Board Certification and became the first woman in surgery at Columbia

the first female professor in the College of Physicians and Surgeons at Columbia University.

Dr. Apgar soon concentrated on obstetric anesthesiology. This is where she would make her biggest mark. She became passionate on the health and welfare of newborn infants. She pointed out that both mother and infant were patients. Since newborn deaths were highest in the first 24 hours after birth, she decided newborn conditions needed more careful monitoring.

Dr. Whipple had seen and wanted Virginia Apgar to give her advice. She received a position at Bellevue Hospital in New York. She was the second woman to become a surgeon. She also founded the department of obstetric anesthesiology. Dr. Apgar became the

To do this monitoring she developed the Newborn Scoring System. This system was a precursor to the Apgar score, a system that uses Dr Apgar's initials. The Apgar scoring system became the standard in hospitals throughout the world. It greatly improved infant survival rates.

Basically, the Apgar system evaluates the newborn infant using five observable signs. A is for Appearance or color. P is for Pulse or heart rate. G is for Grimace, the baby's reflexes and response to irritation. A is for Activity or movement of arms and legs. And R is for Respiration, is the baby breathing easily.

Dr. Apgar decided to check the baby again at five minutes after birth. When the two scores were added together, either the one minute score or the five minute score was needed.

Virginia Apgar's work led to the creation of the Virginia Apgar Foundation for Infant Health. Here, she concentrated on research and raising funds for related medical topics.

Dr. Apgar accomplished much in medicine. However, she also had other interests. She loved fishing and stamp collecting. And she had a great love for music. She was an accomplished cellist and violinist. She even built some of her own instruments.

Virginia Apgar died in 1974 at the age of 65. Twenty years later the U.S. Postal Service honored her with a stamp bearing her picture.

one minute after birth and the best score. The scores for each sign. If the total is under 5 at five minutes, medical intervention is needed. The Apgar score is used along with the Apgar score. She lectured at the National Conference on the March of Dimes. She was a pioneer in the study of birth defects throughout the world, lecturing on
