## Mean

Sheet 1

- 1) Helen took four tests, for which her mean score was 26. Later on, it was found that her score in the English test was wrongly recorded as 51 instead of 15. What was the corrected mean score?

\_\_\_\_\_

- 2) The weights of 11 swimmers in the team were recorded by the coach and the average weight was 86 pounds. Three swimmers whose weights were 88 pounds, 79 pounds, and 83 pounds left the team. What was the new average?

\_\_\_\_\_

- 3) The mean of a set of numbers is 20. If 10 and 30 are added to the set, what is the new mean?

\_\_\_\_\_

- 4) The mean of 40 numbers is 20. If 43 and 60 instead of 30 and 50 are misread as 43 and 60 instead of 30 and 50, what is the new mean?

\_\_\_\_\_

- 5) The mean of a set of numbers is 15. If each number is multiplied by 8, what is the new mean?

\_\_\_\_\_

- 6) Trevor mows the lawns in the neighborhood. The mean of his earnings from three houses is \$98. What is the new mean if he earns \$22 from a fourth house?
