# Pythagorean Theorem

The area of the square on the hypotenuse equals the sum of the areas of the squares on the other two sides.

$$a^2 + b^2 = c^2$$

Sides **a** and **b** represent the legs of

$$\text{Square A} = a \times a = a^2$$

$$\text{Square B} = b \times b = b^2$$

$$\text{Square C} = c \times c = c^2$$

Lengths of the sides **a**, **b** and **c**, can be the "**Pythagorean equation**".

$$b^2 = c^2$$
