2) Omnivores have
Give reasons.

Omnivores eat
them tear flesh

Sharp teeth and molars.

Sharp teeth help

3) Why do cows have flat, broad teeth?

Cows are herbivores. Having flat, broad teeth helps them chew leaves, grass, and other plant matter.

Herbivores, Carnivores, or Omnivores?

4) What are the main characteristics of carnivores?

Carnivores are meat-eaters. Carnivores like lions and tigers have sharp and pointed front teeth to tear the flesh of other animals. Birds in this group have curved and pointed beaks to eat meat.

5) How do the str

he zebra?

The diet of a zebra consists of tough grass stems. The strong zebra teeth also make it easy to eat these tough grasses. They eat tough stems.
