Subtraction

Mission to Mars!

Object of the game:
To subtract numbers with a pair of dice and land your rocket on planet Mars! The first player to complete the game is the winner!

Things needed:

Instructions:
A minimum of 2 and a maximum of 4 players are to place their counters at the starting point – Launch 3...2..1.

To determine who will go first, each player will roll the dice once. The player who obtains the largest number gets to move his/her counter first.

Every time a dice is rolled, the players will need to write down the two numbers on a piece of paper and subtract them.

Based on the difference arrived at – (0,1,2,3,4 or 5); players are to move their counters on the trail. If a player lands on any of the squares that contain instructions; follow them to move ahead or back on the trail to reach destination Mars!

A minimum of 2 and a maximum of 4 players may play this fun-filled game. All players are to place their counters at the starting point -Launch 3...2..1.

The player who travels through space and reaches the red planet first is the winner!

How to play:
For example, John gets a difference of 4 after subtracting the numbers on the dice. He then moves his counter back one space. Similarly, other players will roll the dice, find the difference and move their counters to the respective positions. Follow instructions, wherever required.

Learning Outcome:
This interactive game will help improve subtraction skills of young ones. Curious little minds will also learn new words related to space travel; thereby enhancing their vocabulary.
