

Subtraction

Stepping Stones Game

Object of the game:

To subtract numbers on a pair of dice and hop on the stones to reach your destination!
The first player to complete the game is the winner!

Things needed:

A pair of dice and counters for 2 players. Download and print the stepping stones game from our website - mathworksheets4kids.com.

Instructions:

Two players can play this fun-packed board game.

To determine who should go first, both players will roll the dice once. The player who gets the larger number will move his/her counter first.

How to Play:

Ann and Susan take turns to roll the dice. Ann subtracts to obtain a difference of 4 and Susan gets a difference of 5. Susan will move her counter to the first stone as she obtained the higher difference of 5. Ann will have to await her turn to move ahead, provided she gets a higher difference in the next round!

Ann and Susan will continue to roll until one of them reaches their destination. The one who reaches the destination first is the winner.

*If a player gets a difference of 0, he/she will get an extra turn.

Learning Outcome:

Little ones will become adept at subtracting numbers from 1 to 6. This game could prove to be a steppingstone for kids to enhance their social skills as well!
