

Area of an Isosceles Triangle

Example:

**In an isosceles triangle, altitude drawn to the base is a median.
Median divides base into equal line segments.**

$$\begin{aligned} \text{height} &= \sqrt{5.2^2 - 2.2^2} \\ &= \sqrt{27.04 - 4.84} \\ &= \sqrt{22.2} \text{ ft} \end{aligned}$$

$$\begin{aligned} b &= 4.4 \text{ ft}, h = \sqrt{22.2} \text{ ft} \\ \text{Area} &= \frac{1}{2} \times b \times h \\ &= \frac{1}{2} \times 4.4 \times \sqrt{22.2} \\ &= \mathbf{10.37 \text{ ft}^2} \end{aligned}$$

Find the area of each isosceles triangle. Round your answer to two decimal places.

1)

Area =

2)

8.6 ft

Area =

4)

Area =

Area =

7)
