

Area of an Isosceles Triangle

Example:

**In an isosceles triangle, altitude drawn to the base is a median.
Median divides base into equal line segments.**

$$\begin{aligned} \text{height} &= \sqrt{6.4^2 - 5.1^2} \\ &= \sqrt{40.96 - 26.01} \\ &= \sqrt{14.95} \text{ ft} \end{aligned}$$

$$\begin{aligned} b &= 10.2 \text{ ft}, h = \sqrt{14.95} \text{ ft} \\ \text{Area} &= \frac{1}{2} \times b \times h \\ &= \frac{1}{2} \times 10.2 \times \sqrt{14.95} \\ &= \mathbf{19.72 \text{ ft}^2} \end{aligned}$$

Find the area of each isosceles triangle. Round your answer to two decimal places.

1)

Area =

2)
